📞 Let's Talk

## ABOUT ME

# Full-Stack Developer & Cybersecurity Student

I'm **Martinus Setiawan** — a Full-Stack Developer and Cybersecurity student who specializes in building **secure business web applications**.

I help businesses build custom dashboards, POS systems, and management applications that are modern, responsive, and built with secure development practices — so you get software that's both powerful and protected.

Currently pursuing a D4 in Cybersecurity and applying that knowledge to every project I ship.

### Quick facts:

- ✔ 3+ years learning & internship experience
- ✔ 50+ projects completed
- ✔ Zero security incidents
- ✔ IT Security & NOC internship background

## WHY WORK WITH ME

# What Sets Me Apart

I don't just write code — I build solutions that are secure, maintainable, and built to last.

 Clean and maintainable code Responsive UI/UX Long-term support

## SERVICES

# What I Can Build

I specialize in business applications that help you manage operations, track sales, and grow efficiently — all built with security in mind.

### Custom Dashboard

Real-time analytics dashboards with data visualization, user management, and role-based access control tailored to your business needs.

### Restaurant POS System

Modern point-of-sale systems for cafes and restaurants — including cashier interface, inventory management, and sales reporting.

### Business Management System

End-to-end management platforms for education, travel, retail, and service industries

### Secure Web Application

Web applications built with OWASP-aware practices, secure authentication, and protected

## PORTFOLIO

# Featured Projects

Real projects I've built for clients and businesses. Each project is designed to solve specific operational problems.

## Restaurant POS System

Full-Stack Developer

Modern POS solution for cafes and restaurants. Streamlines ordering, inventory, and reporting in one dashboard.

### FEATURES

- POS / Cashier Interface
- Inventory Management
- Sales Reports & Analytics
- Multi-User Role Access
- Order History

[Next.js](#)[React](#)[TypeScript](#)[Tailwind CSS](#)[Firebase](#)[👁 Live Demo](#)[📄 GitHub](#)

## Business Dashboard

Full-Stack Developer

Real-time analytics platform for monitoring business performance across multiple departments.

### FEATURES

- Real-Time Data Visualization
- User Activity Monitoring
- Custom Report Builder
- Role-Based Access Control
- Alert & Notification System

Next.js

Node.js

TypeScript

PostgreSQL

WebSocket

 GitHub

## Education Management System

Full-Stack Developer

Student and teacher management platform for schools and training institutions.

### FEATURES

- Student & Teacher Management
- Course & Schedule Planning
- Grade & Attendance Tracking
- Parent Portal Access
- Report Generation

Laravel

React

MySQL

Tailwind CSS

## Travel Management System

Full-Stack Developer

Booking and reservation platform for travel agencies handling schedules and customer data securely.

### FEATURES

- Booking & Reservation Engine
- Payment Gateway Integration
- Schedule Management
- Customer Database
- Automated Confirmation

### TECH STACK

## Technologies I Use

Modern tools and frameworks I work with to build reliable business applications.

## SECURE DEVELOPMENT

# Security Is My Foundation

As a **Cybersecurity student**, I apply secure coding practices and modern authentication concepts in every project I build. Security isn't an afterthought — it's part of the development process.

This is what sets me apart from typical web developers — every application I build is designed with protection in mind from day one.

- ✓ Secure Authentication
- ✓ Role-Based Access Control
- ✓ Input Validation
- ✓ Secure Database Design
- ✓ OWASP Top 10 Awareness

## CASE STUDY

# How I Solve Real Problems

A closer look at one project — from problem to solution.

### PROBLEM

A local cafe needed a centralized management system. They struggled with manual order processing, inventory tracking errors, and had no visibility into daily sales.

### SOLUTION

Built a modern POS dashboard with intuitive cashier interface, real-time inventory tracking, automated sales reports, and role-based access for owners and staff.

### RESULT

Order processing time reduced by 60%. Inventory errors eliminated. Real-time sales data accessible from any device. Handles 200+ daily transactions.

### FEATURES

- POS / Cashier
- Inventory
- Sales Reports
- Dashboard
- Multi User

### AVAILABILITY

## Available For

I'm open to collaborations and projects worldwide.

#### Remote Work

Fully equipped for remote collaboration across time zones

#### Freelance Projects

Available for contract and project-based work

### International Collaboration

Open to working with global teams and clients

## Ready to Build Your Next Project?

Let's discuss your idea. I'm available for freelance projects — from dashboards to complete business management systems.
